

MAINTENANCE DREDGING OF SOCIEDAD PORTUARIA REGIONAL BUENAVENTURA S.A

Buenaventura, November 6th, 2020

Sociedad Portuaria Regional Buenaventura S.A., informs maritime lines, users, customers and the general public, that from November 11th, 2020, it is planned to start the maintenance dredging or re-cleaning campaign up to the design limits in the berths and operational strips of SPRBUN S.A., with the objective of counteracting the periodic natural increase of sedimentation in the physical environment of the Bay of Buenaventura and its direct impact on the maritime areas of our Terminal.

For the execution of these works, Sociedad Portuaria Regional Buenaventura S.A. has contracted the dredging company DREGING INTERNATIONAL COLOMBIA, a Dutch contractor, who will be using the “LANGE WAPPER”

As a result of this maintenance dredging and the restitution of the depths up to the current design levels, the direct arrival of vessels to the Buenaventura Maritime Terminal managed by SPRBUN S.A. will be improved.; In the same way, it will substantially improve the nautical safety conditions for the merchant ships that arrive and depart from our terminal, increasing the levels of competitiveness and efficiency of the Port of Buenaventura for the benefit of Colombian foreign trade.
